Q: Compile exe with old build configuration in Visual Studio 2015 I'm making a program and I want to make a separate exe for my self to use on my computer and share with my friends, but I have this problem. I have a build configuration in VS called 'Release', and when I try to compile it using the exe file I made, it gives me a error saying that the.exe can't be executed. But when I make it with another build configuration it compiles just fine. Here's what I did: I made my exe with the 'Release' build configuration, then I changed the 'Build Configuration' to something else, so I could test if the exe will work or not. And it did. So I changed the build configuration back to 'Release' and tried to compile it again. But it didn't work. I'm using Visual Studio 2015. Did I do something wrong? Is there a way to compile the exe with the same build configuration, or do I have to make a different one to compile my exe? I would really appreciate any help. Thanks!

A: You can build an EXE with a different configuration, but you need to give the new configuration all the information about the changes that you have made. Right click on your project. Select properties. Scroll down to the "Application" tab. Click on the "Build" button. Now you will find a list of configurations. Choose the one that you want to make. "Configuration" and "Build" are the two main tabs. Once the configuration is set click on the "Build" button. What's New in the Photoshop CC 2019 Version 20?

Warren Buffett has another pick that could be worth a whole lot. The investor and chairman emeritus of Berkshire Hathaway shares the greatest stock pick in the history of the stock market: U.S. Steel Corp. If you believe Ben Graham, Charles Dow, or "Salomon's Wizard," Benjamin Graham, all of whom Warren Buffett thinks are relevant, then you should also believe that — even if you're not in the market — U.S. Steel is a terrific stock at a great price. Renaissance

Centers With a market cap of \$12.0 billion, U.S. Steel Corp. is the fifth-largest steelmaker in the world. Its shares trade for \$9.11, which — if you believe U.S. Steel is priced fairly and is trading at a bargain, which Buffett does — means the company trades at a 50% premium to its intrinsic value. U.S. Steel has three business lines: primary iron and steel production; steel products, including coke, plate, and rod for the automotive, aerospace, and other industries; and a railroad business. Take a look at a growth chart for U.S. Steel: Source: U.S. Steel I like U.S. Steel's three business lines, and I like the coke-related activities, particularly the conversion of iron ore into steel, which will be a primary growth driver, especially as electric cars go mainstream in the coming decades. First: U.S. Steel's operating profits have grown at a compound annual rate of 30% since 2010, and will keep growing. That means iron and steel output will also keep growing. After all, "that's what you get when your costs are growing at 5% and your margins are growing at 40%. Second: The coke-conversion business has been growing for years, and is expected to grow at a compound annual rate of about 4% for the next 10 years. Third: The railroad business has grown each year since it was spun off from U.S. Steel in the mid-1990s. Trusting the numbers, I think the business mix is solid. Also, a two-year low for steel prices in January isn't much of a concern, as they're expected to bounce back in 2016. As a general rule, the stock market tends to like steel-related companies. So I see no reason to doubt
